CHAMBERS'S SEVEN-FIGURE LOGARITHMS

OF NUMBERS UP TO 100000

JAMES PRYDE, F.E.I.S.

W. & R. CHAMBERS LTD.

6 DEAN STREET, LONDON, W.1
11 THISTLE ST., EDINBURGH, 2

EXPLANATION OF THE TABLES.

COMMON LOGARITHMS.

(1) A Table of Logarithms is a collection of auxiliary numbers, so constructed, that by it Multiplication of common numbers can be performed by addition of their Logarithms; Division by their subtraction; Involution, or raising of powers, by their multiplication; and Evolution, or extraction of roots, by their division. These auxiliaries or Logarithms are the exponents or powers to which an invariable number called the base has to be raised, in order to produce the number of which it is the Logarithm.

The above expressed in algebraic symbols, where A and B represent two numbers, is

(a)
$$\operatorname{Log.}(A \times B) = \operatorname{log.} A + \operatorname{log.} B$$
.

(b)
$$\operatorname{Log.} \frac{A}{B} = \log. A - \log. B.$$

(c)
$$\operatorname{Log.} A^n = n \operatorname{log.} A$$
.

(d) Log.
$$\sqrt[n]{A} = \text{Log. } A^{\frac{1}{n}} = \frac{1}{n} \log. A.$$

(2) In the following Tables of common logarithms, the base = 10, and the power to which 10 has to be raised to produce any number, is therefore the logarithm of that number; thus,

If, beginning again with 101, we divide successively by 10, we obtain the following results:

- (3) From the above it appears that the common $\hat{\text{Log. 10}}$ = 1; hence, the logarithms of numbers greater than 1 and less than 10, will be greater than 0 and less than 1; in other words, will be some proper fraction or decimal, without an integer; that the logarithms of all numbers greater than 10 but less than 100, will be greater than 1 and less than 2, or will be 1 + a decimal; while the logarithm of a number consisting of 3 integral figures will be 2 + a decimal, and so on; the integral part of the logarithm being always one less than the number of integral figures in the number of which it is the logarithm.
- (a) Definition.—The integral part of a logarithm is called its characteristic, and the decimal part is called the mantissa.
- (4) It also appears that the logarithms of all proper fractions are negative; thus, the logarithm of $\frac{3}{4}$ or log. '75 is (1, b) log. $3-\log$. 4, or '4771213 '6020600 = '1249387; but subtracting this from 0, the logarithm of 1, we have $\overline{1}$ '8750613, where the characteristic only is negative, and the mantissa is positive, and consists of the same figures as the mantissa of log. 75, which is 1 '8750613; from which it appears that the mantissa of the logarithm of a number is the same, so long as the digits of the number remain the same, and that the characteristic alone changes according to the position of the decimal point; thus,

Log. 43758 = 4.6410575Log. 4375.8 = 3.6410575Log. 437.58 = 2.6410575Log. 43.758 = 1.6410575Log. 4.3758 = 0.6410575Log. 43758 $= \bar{1}.6410575$ Log. .043758 $= \overline{2}.6410575$ Log. .0043758 $= \overline{3}.6410575$ &c. &c.

- (a) This property of the characteristic and mantissa is only true of logarithms whose base is the same as the root of the scale of arithmetical notation; it is not true of Naperian logarithms; hence, a table of Naperian logarithms, in order to be universally useful, would require to be infinite in extent. For this reason a table of common logarithms is far more general, and more easily used than logarithms calculated to any other base.
- (5) The Characteristic.—From what has been said above, and from the fact that only the *mantissa* of the logarithm is put in the Table, the *characteristic*, in each case, must be supplied by the calculator himself. This is done by the following easy Rules.

- (a) If the number whose logarithm is sought contain one or more integral figures, the characteristic is always one less than the number of integral figures in the number, and is positive.
- (b) If the number is wholly a decimal, its characteristic is the same as the place from the decimal point which its first significant figure occupies, and is negative: in this case the negative sign is placed over the characteristic, to shew that it alone is negative, the mantissa being always positive.

(6) TO FIND THE LOGARITHM OF A GIVEN NUMBER BY THE TABLES.

(a) If the number consist of not more than three figures: the mantissa will be found opposite it on one of the first five pages; and the characteristic must be supplied by (5, a) or (5, b), according as it contains an integer, or is all a decimal. In this manner is found,

Log. 852 =
$$2.9304396$$

and Log. 45 = $\overline{1}.6532125$

(b) If the number contain four digits: the mantissa will be found on pages 6 to 185 under 0 at the top of the page, and opposite the number itself in the column marked No. at the left-hand side of the page; and the proper characteristic must be applied as in the last case. In this manner is found,

Log.
$$374.5$$
 = 2.5734518
and Log. 03745 = $\overline{2}.5734518$

(c) If the number contain five digits: the mantissa will be found on pages 6 to 185, opposite the first four figures on the left-hand side of the page, and under the fifth at the top. In this way it is found that

$${f Log.} \ 87647 = 4.9427371$$
 and ${f Log.} \ .78539 = \overline{1}.8950854$

(d) If the number whose logarithm is sought contain six or seven figures: find the mantissa corresponding to the first five figures as directed in (c); then take the difference between this logarithm and the next higher in the table, which is the change in the logarithm corresponding to an increase of 1 or a unit in the fifth figure of the number. Now, the sixth figure is tenth parts of this unit, and the sixth and seventh are hundredth parts of this unit; in other words, are decimals in reference to it. Hence, if the difference found above be multiplied by the figures above five, considered as decimals, and the product added to the logarithm found as above, it will be the true logarithm sought; thus: Find the logarithm of 387548.

```
Log. 38754 = .5883165

Log. 38755 = .5883277

their difference is and 112 × ⋅8 = 89⋅6 or 90 = correction

∴ Log. 387548 = .55883255
```

Find the logarithm of 276.5473.

```
Here Log. 276 \cdot 55 = 2 \cdot 4417737

Log. 276 \cdot 54 = 2 \cdot 4417580

their diff. is = 157

and 157 \times .73 = 114 \cdot 61 or 115 = correction.

\therefore Log. 276 \cdot 5473 = 2 \cdot 4417695
```

The lines above the figures seen on many of the pages indicate that a change has occurred in the *first three figures* of the mantissa. Thus, on page 2, line 3, the log, of 10024 = 4.0010411, not 4.0000411.

(7) PROPORTIONAL PARTS BY INSPECTION.

These corrections can also be more readily made, by means of the columns of proportional parts to be found on the right-hand side of each page; thus, under diff. 112, and opposite 8, is found 90, which being added to the last figures of the log. 38754, gives log. 387548 as above. Also, under the difference 157, and opposite 7, is found 110, and opposite 3 is found 47; but 3 being in the seventh place, 47 must be taken as 4·7; which, being nearer to 5 than 4, must be taken as 5; and this added to the 110 gives 115 as the correction to be added to the log. 276·54, to obtain the logarithm of 276·5473; the result being the same as found above.

The differences change so rapidly at the beginning of the Tables, that for want of room, only every third difference is given, from page 2 to 9, and every second difference, from page 10 to 19: from page 20 to end, every difference is given. When the exact difference is not given, use that which differs from it only by one, and the result will be sufficiently exact for ordinary purposes; but, when the greatest accuracy is required, correct by the rule (d) above.

EXERCISES.

| 1. The logarithm of | 729 | = | 2.8627275 |
|---------------------|---------|----|-----------|
| 2. The logarithm of | 4.385 | = | 0.6419696 |
| 3. The logarithm of | 53874 | = | 4.7313792 |
| 4. The logarithm of | 53.8745 | _= | 1.7313833 |
| 5. The logarithm of | -003768 | = | 3.5761109 |
| 6. The logarithm of | | - | 6.8950891 |

(8) TO FIND THE NUMBER CORRESPONDING TO A GIVEN LOGARITHM.

The number of which a given value is the logarithm is frequently called its Antilogarithm, and smaller tables usually give for convenience a separate table of Antilogarithms. For seven figures of decimals such a table would be extensive; it is superfluous, since the user has merely to reverse the process for finding a logarithm, i.e. find from the table which number yields the given logarithm.

When the logarithm is not found in the table, take out the next lower and the five figures of the number belonging to it; then, find the difference between this logarithm and the given one, and under the corresponding tabular difference find the proportional part which is equal to this difference, and opposite it is found the sixth figure of the number: but if the difference is not exactly found among the proportional parts, take the next lower part, and the figure opposite it is the sixth figure of the number; subtract this part from the given difference, annex to the remainder a cipher, con-

sider it as a new proportional part, and find the corresponding figure as before, and it will be the seventh figure of the number.

EXAMPLE.

| Find the number | (or antilogarithm) | whose logarithm is 3.9212074. |
|-----------------|--------------------|-------------------------------|
|-----------------|--------------------|-------------------------------|

| one named | (or winding | Sarrani | 11 11000 10 | Secretaria . | 0 0 0 - 4 | |
|------------------|--------------|-------------|-------------|--------------|-----------|--------|
| Given logar | rithm | | | = | 3.921 | 2074 |
| Number = | 8340.7 to | next low | er log. | = | 3.921 | 2025 |
| | | | | | | 49 |
| Number = | 109 1 | o next lov | ver pro. | part | = | 47 |
| | | | | | | 20 |
| ${\rm Number} =$ | | to nearest | pro. par | rt | = | 21 |
| Hence | 8340.794 | is the requ | ired nu | mber or a | ntiloga | rithm. |

COMPUTATION OF NEGATIVE CHARACTERISTICS.

It is usual to make only the characteristic of a logarithm negative, as the calculations can thus be made more conveniently. Calculations with negative characteristics are made according to the rules of algebraic addition and subtraction.

(9) (a) To add two negative characteristics.

Take their sum, and make it negative. Thus 2 added to 3, gives 5.

(b) To add a positive and negative characteristic.

Take their difference, and consider it to be positive or negative according as the positive or negative characteristic is the greater; that is, the difference has the sign of the greater.

Thus 6 and $\overline{2}$ give 4; 5 and $\overline{2}$ give 3; $\overline{5}$ and 2 give $\overline{3}$; $\overline{2}$ and 1 give $\overline{1}$; and so on.

The following examples will easily be performed by attending to these two rules:

EXAMPLES.

1. Add **5**·3468541 and 3̄·2685427 5·3468541 3·2685427

2.6153968

2. Add 6·3874654 and 2·9245636

6·3874654 2·9245636

5.3120290

In this example the sum in the first decimal place is 13, and the 1 is carried to 6 which gives 7, then 7 and $\bar{2}$ give 5.

8. Add 2.5632874 and 3.2465281

2.5632874 2.9465991

3.2465281

₹·8098155

(10) To subtract a negative characteristic.

Change its sign to plus, and then add it by the preceding rules for addition. Thus, to subtract $\overline{3}$ from 2, the result is found by adding 3 to 2, which gives 5. So $\overline{5}$ subtracted from $\overline{2}$, gives 5 and $\overline{2}$, or 3; also $\overline{3}$ subtracted from $\overline{5}$, gives 8 and $\overline{5}$, or $\overline{2}$.

EXAMPLES.

1. From 2.6847658 subtract 3.2468543

2.6847658 $\overline{3}.2468543$

5.4379115

2. From 2.3468537 subtract 5.7654626

 $\overline{2} \cdot 3468537$ $\overline{5} \cdot 7654626$

2.5813911

Here $\overline{5}$ taken from $\overline{2}$, gives 5 and $\overline{2}$, or 3; but in subtracting the first decimal places, there is one to be carried; in other words, 1 is to be subtracted from the upper number $\overline{2}$, which makes it $\overline{3}$, then $\overline{3}$ and 5 give 2.

3. From $\overline{5}.6843252$ subtract $\overline{3}.7856310$

5.6843252 3.7856310

3.8986942

Here $\overline{3}$ taken from 5, gives 3 and $\overline{5}$ or $\overline{2}$, and a 1 of carriage. which is of course to be subtracted, gives $\overline{2}$ and $\overline{1}$ or $\overline{3}$; or the 1 of carriage, with the $\overline{5}$ makes $\overline{6}$, and $\overline{3}$ taken from $\overline{6}$, gives 3 and $\overline{6}$ or $\overline{3}$.

(11) To multiply a logarithm with a negative characteristic.

Multiply the fractional part by the common rules; then multiply the negative characteristic, which will give a negative product, and add the carriage to it by the rule (b) above.

Thus $\overline{2}$, multiplied by 5, gives $\overline{10}$, and if 2 of carriage is to be added, the result is $\overline{8}$.

EXAMPLES.

1. Multiply \(\bar{2} \cdot 3685464 \text{ by 2} \)
\(\bar{2} \cdot 3685464 \text{ by 2} \)

2 0000101

4·7370928

2. Multiply \$\overline{3} \cdot 7856473\$ by 6 \$\overline{3} \cdot 7856473\$

6

14.7138838

Here $\overline{3} \times 6 = \overline{18}$, and $\overline{18}$, with the carriage 4, gives $\overline{14}$.

(12) To divide a logarithm having a negative characteristic.

If the characteristic is divisible by the divisor, write down the quotient with a negative sign, and divide the fractional part by common rules. But if the negative characteristic is not divisible by the divisor, add such a negative number to it as will make it divisible, and prefix an equal positive integer to the fractional part of the logarithm; then divide the increased negative exponent and the other part of the logarithm separately, and the former quotient, taken negatively, will be the characteristic to the fractional part of the quotient.

Thus $\overline{0}$, divided by 3, gives $\overline{2}$. But to divide $\overline{10}$ by 3, add $\overline{2}$ to it, and then $\overline{10}$ is equal to $\overline{12}$ and 2; the former, divided by 3, gives $\overline{4}$, and the latter $\frac{2}{3}$. The quotient, therefore, is $\overline{4}$ and $\frac{2}{3}$.

EXAMPLES.

1. Divide 6.3246846 by 3

 $\overline{6} \cdot 3246846 \div 3 = \overline{2} \cdot 1082282$

2. Divide <u>14</u>·3268472 by 9

 $\overline{14} \cdot 3268472 = \overline{18} + 4 \cdot 3268472$ = $\overline{2} \cdot 4807608$

and the quotient is

2. Multiply

Here 4 must be added to $\overline{14}$, that the sum $\overline{18}$ may be divisible by 9; and as $\overline{4}$ is thus added, therefore 4 must be prefixed to the fractional part, and thus the value of the logarithm is unaltered, for there is added to it $\overline{4}$ and 4, or 0.

(13) To Perform Multiplication by Logarithms.

Add the logarithms of the factors, and the sum will be the logarithm of the product.

EXAMPLES.

1. Multiply 2.581926 by 345.7291.

L 2.581926 = 0.4119438L 345.7291 = 2.5387359

Product = 892.647, its log. = 2.9506797 Sum.

roduct = 892.647, its log. = 2.9506797 Sum

03902, 59.716, and 00314728, $L.03902 = \overline{2}.5912873$ L.59.716 = 1.7760907 $L.00314728 = \overline{3}.4979353$

Product = .007833533, its log. = $\frac{1}{3.8653133}$ Sum.

EXERCISES.

1. Multiply 231.4 and 5.062.

2. Multiply 35.86, 2.1046, .8372, and .00294.

Ans. 1171.347. Ans. .1857618.

(14) To Perform Division by Logarithms.

From the logarithm of the dividend subtract that of the divisor, and the remainder will be the logarithm of the quotient

EXAMPLES.

1. Divide 371·49 by 52·376.

L 371·49 = 2·5699471 }
L 52·376 = 1·7191323 }

Quotient = 7·092752 0·8508148 Diff.

Quotient = .0005744694

2. Divide

07438 by $129\cdot476$. L $07438 = \overline{2}\cdot8714562$ L $129\cdot476 = \underline{2}\cdot1121893$ L $\overline{4}\cdot7592669$ Diff.

EXERCISES.

Divide 241.63 by 4.567.
 Divide .6314 by .007241.

Ans. 52.90782. Ans. 87.19792.

(15) To perform Proportion by Logarithms.

Add together the logarithms of the second and third terms, and from their sum subtract the logarithm of the first, and the remainder will be the logarithm of the fourth term.

- (a) The arithmetical complement of a number is the remainder, after subtracting it from a number consisting of 1, with as many ciphers annexed as the number has of integers. When the index of a logarithm is less than 10, which is generally the case, its arithmetical complement is found by subtracting it from 10.
- (b) The arithmetical complement of a logarithm is easily found by subtracting its right-hand significant figure from 10, and all those before it from 9.

Instead of subtracting the logarithm of the first term, its arithmetical complement may be added to the logarithms of the second and third, and the sum, after deducting 10 from the index, will be the logarithm of the fourth term.

EXAMPLE.

Find a fourth proportional to 723.4, .02519, and 3574.862.

| As | 723.4 | 2.8593785 | ar. com. | 7.1406215 |
|-------|----------|-------------------|----------|-----------|
| To | .02519 | 2 ·4012282 | | 2·4012282 |
| So is | 3574.862 | 3.5532592 | | 3.5532592 |
| | | 1.9544874 | | T·0951089 |
| To | 1244827 | 1·0951089 | | |
| | | | | |

In the first method, the logarithms of the second and third terms are added, and that of the first term is then subtracted from the sum; and in the second method, the arithmetical complement of the logarithm of the first term is added to the logarithms of the second and third, and from 9 the index 10 is subtracted, which gives I for a remainder.

(c) The arithmetical complement of a number is also sometimes understood to be the algebraic remainder after subtracting the number from zero or nothing. Instead of subtracting a number from another, if this arithmetical complement

of the former is added to the latter, the sum will be the required difference without deducting 10 or any other number. Thus, in the above example,

A. C.* of L 723·4 = $\overline{3}$ ·1406215 L ·02519 = $\overline{2}$ ·4012282 L 3574·862 = $\overline{3}$ ·5532592 $\overline{1}$ ·0951089

which is the same result as before.

(16) TO PERFORM INVOLUTION BY LOGARITHMS.

Multiply the logarithm of the given number by the exponent of the power to which it is to be raised, and the product will be the logarithm of the required power.

EXAMPLE.

Find the cube of 30.7146.

L 30·7146 = 1·4873449
$$\frac{3}{4\cdot4620347} = L 28975\cdot75$$

Hence the cube of 30.7146 = 28975.75.

EXERCISES.

1. Find the fourth power of 9.163.

Ans. 7049:38.

2. Find the 365th power of 1.0045.

Ans. 5.148888

(17) To Perform Evolution by Logarithms.

Divide the logarithm of the given number by the exponent of the root which is to be extracted, and the quotient will be the logarithm of the required root.

EXAMPLES.

1. Find the cube root of 12345.

L 12345 = 4.0914911

Its quotient by 8

= 1.3638304 = L 23.11162

Hence

3/ 12345 = 23·11162

2. Find the fourth root of .0076542.

 $L \cdot 0076542 = \overline{3} \cdot 8838998$

Its quotient by 4 (by 12)

 $= \overline{1} \cdot 4709749 = L \cdot 295784$

Hence

∜ '0076542 = '295784

(18) To find the value of x in the equation $a^x = b$.

By (1, c) we have
$$x$$
 Log. $a = \text{Log. } b$.
 $\therefore x = \log_{\cdot} b \div \log_{\cdot} a$
Let $a = 40$, and $b = 10$
Then $x = \frac{1.0000000}{1.6020600} = .6241964$

^{*} A. C. is a contraction for arithmetical complement.

(1)

Next.

let
$$a = .8$$
, and $b = 3.1416$
Then $x = \frac{\text{Log. } 3.1416}{\text{Log. } .8} = \frac{0.4971509}{\overline{1.9030900}}$

$$= \frac{0.4971509}{0.0969100}$$

$$= -\frac{.4971509}{.0969100} = -\frac{4971509}{969100}$$

$$= -5.130027$$

In this latter case we have to change the divisor $\overline{1}$.9030900 into -.0969100 before the division can be conveniently performed.

(19) TO FIND THE AMOUNT AND PRESENT VALUE OF A SUM OF MONEY AT COMPOUND INTEREST BY LOGARITHMS.

Let
$$p =$$
 the principal,
 $a = "$ amount,
 $t = "$ time or number of payments of interest,
 $r = "$ interest of £1 for one period,

(1+r)=R= amount of £1 for one period.

Then $a = p R^t$ which, by taking the logarithms of both sides, becomes

$$Log. a = log. p + t log. R,$$
 (2)

Transposing

$$\text{Log. } p = \log_{\bullet} a - t \log_{\bullet} R_{\bullet} \tag{3}$$

$$Log. R = \frac{log. a - log. p}{t},$$
 (4)

$$t = \frac{\log \cdot a - \log \cdot p}{\log \cdot R}.$$
 (5)

Also the interest

$$= a - p = p \left(\mathbb{R}^t - 1 \right) \tag{6}$$

Note.—If in the above formulæ p =the present value of a sum a due t periods hence, they are equally true for the present value; t, r, and R being the same as above.

When t is large, the logarithm of R, in order to obtain correct results, should be taken with more than seven places of decimals; for which reason the most common values of R, with their logarithms carried to ten decimals, are inserted in the following table:

LOGARITHMS OF R.

| R, | Logarithm. | R. | Logarithm. |
|--------|------------|--------|-------------|
| 1.0025 | | 1.0325 | |
| 1.0050 | | 1.0350 | 01494,03498 |
| 1.0075 | | 1.0375 | |
| 1.0100 | | 1.0400 | |
| 1.0125 | | 1.0425 | |
| 1.0150 | | 1.0450 | |
| 1.0175 | | 1.0475 | |
| 1.0200 | | 1.0500 | |
| 1.0225 | | 1.0525 | |
| 1.0250 | | 1.0550 | |
| 1.0275 | | 1.0575 | |
| 1.0300 | | 1.0600 | |

EXAMPLE L

Find the amount and compound interest of £365, 10s., for 19 years at 41 per cent.

Since the rate per cent. is 4.25, the rate for £1 = r = .0425, and R = 1.0425, t = .19, and p = .365.5; then by (2),

t log. R = 19 × ·0180760636 = 0·3484452084
+ log.
$$p$$
 = log. 365·5 = 2·5628874
∴ log. a = log. 805·9954 = 2·9063326
297
2908 ÷ 54 = 54.

Hence the amount = £805, 19s. 11d. +

Also the interest = a - p by (6) = £805, 19s. 11d. - £365, 10s. =£440, 9s. 11d.

EXAMPLE II.

Find the present value of £584, 15s. 6d., due 12 years hence, compound interest at $3\frac{1}{5}$ per cent.

Since the rate per cent. is 3.5, the rate for £1 = r = .035, and R = 1.035, t = 12, and a = £584.775; then by (3),

Log.
$$a = \log.584.775$$
 = 2.7669888
- $t \log. R = -12 \times .0149403498 = 0.1792841976$
.: $\log. p = \log.386.9943$ 2.5877046024
6997
113)49024
Hence $p = £386, 198.1024.$ - 43

EXAMPLE III.

At what rate per cent. will £365, 10s. amount to £805, 19s. 11d. in 19 years? Here a = 805.995, p = 365.5, and t = 19; hence by (4),

Log. R =
$$\frac{\log. a - \log. p}{t}$$

= $\frac{2.9063324 - 2.5628874}{19}$
= $\frac{0.3434450}{19} = .0180761$ nearly
= $\log. 1.0425 \cdot R = 1.0425$
 $\tau = .0425$, and the rate per cent, is therefore
= $4.25 = 4\frac{1}{4}$, the rate sought.

Hence

EXAMPLE IV.

In what time will £250 amount to £846, 11s. 9_1^4 d., at 5 per cent. per annum? Since a = 846.5885, p = 250, R = 1.05, by (5),

$$\begin{aligned} & \boldsymbol{t} = \frac{\log. \ a - \log. \ p}{\log. \ R} = \frac{2.9276723 - 2.3979400}{.0211893} \\ & = \frac{.5297323}{.0211893} = 25 \text{ years, the time sought.} \end{aligned}$$

(8)

EXAMPLE V.

Find the present value of £3245 due 30 years hence at 4½ per cent., compound interest.

Here a = 3245, R = 1.045, and t = 30; hence by the Note and (3),

Log.
$$p = \log_a a - t \log_a R$$
,
or $\log_a p = \log_a 3245 - 30 \times \log_a 1.045$
= 3.5112147 - .5734887120
= 2.937725988 = $\log_a 866.415$

.. the present value = £866, 8s. 3¹d. nearly.

EXAMPLE VI.

The present value of £596 due 12 years hence, compound interest, is £383, 3s. 4½d.; what is the rate per cent. per annum?

Here a = 596, p = 383.168, t = 12; hence by the Note and (4),

Log. R =
$$\frac{\log. a - \log. p}{t}$$

= $\frac{2.7752463 - 2.5833893}{12}$
= $\frac{.1918570}{12}$ = .0159881
= Log. 1.0375 = log. R;

 \therefore R = 1.0375, and the rate per cent. is 33.

(20) To find the amount and present value of an annuity, for a GIVEN TIME, AT A GIVEN RATE PER CENT. COMPOUND INTEREST.

Let p = the annual or periodic payment;

A = the amount of the annuity improved at compound interest to the end of the time;

v = the present value of the annuity;

 $\mathbf{R} =$ the amount of £1 for one period;

and t = the number of years, or periods of payment.

Then

$$\mathbf{A} = p\left(\frac{\mathbf{R}^{l} - 1}{\mathbf{R} - 1}\right),\tag{7}$$

$$v = \frac{p(R^t - 1)}{R^t(R - 1)} = \frac{1}{R^t} A;$$
(8)

 \therefore also $A = vR^t$. Hence from (7).

Log. A =
$$\log p + \log (R^t - 1) - \log r;$$
 (10)

from (8).

Log.
$$v = \log_{10} p + \log_{10} (R^t - 1) - \log_{10} r - t \log_{10} R$$
; (11)

and from (9),

$$Log. A = log. v + t log. R.$$

Transposing (12),

$$Log. R = \frac{log. A - log. v}{t}$$

WITHDRAWN This is a NORMAL LOAN item.

We will email you a reminder before this item is due.

Please see http://www.ssl.ox.ac.uk/lending.html for details on:

- loan policies; these are also displayed on the notice boards and in our library guide.
- how to check when your books are due back.
- how to renew your books, including information on the maximum number of renewals.
 Items may be renewed if not reserved by another reader. Items must be renewed before the library closes on the due date.
- level of fines; fines are charged on overdue books.

Please note that this item may be recalled during Term.
